

STGBX-54-XP

RAMTECH INDUSTRIES INC

MADE IN USA

54 Input Patchable Stagebox

- Neatly store unused cable lengths behind closing doors
- Patch in advance, maintain patch, simple multipin hook-up
- Perfect for touring, festivals, church installation

The Stagebox 54 Cross Patch (STGBX-54-XP) is a main stage input panel consisting of 48 female xlr inputs with dual ground lift switches and features a user definable random patching system from the CPC sub inputs to male xlr leads that are held in 4 individually colored groups of 12 in dedicated compartments.

This enables the end user the freedom to patch input channels 1-48 to any output.

The 4 CPC sub-input channels are grouped 1-12, 13-24, 25-36, and 37-48. Channels 49-54 can be used as tie lines and have both male and female xlr connections in parallel providing convenience in patching for either inputs or returns. Ramlatch multi-pin outputs ensure a robust connection to the main, split 1 (monitor), and split 2 (recording) consoles This is a 15 rack space fully enclosed box.
